

# IoT security from the consumer's perspective

Jorge Pinto

Confraria de Segurança da Informação

24th June 2015

# AP2SI

Born in 2012, AP2SI is a non lucrative private association characterized by:

- Openness by associating with every individual to help in information security matters;
- Focus with the dedication to fulfill its objectives and mission;
- Non competitive: has no goal in information security services;
- Independent: not controlled by organizations.
- From concerned individuals to the society.

# Mission

Actively contribute to the information security mindset development in Portugal:

- Raising awareness to the value of information and requirements to protect it;
- Developing guidelines/best practices to enhance knowledge and help qualifying information security personnel;

So....

What is the IoT ?

(from the consumer's perspective)

So....

The IoT is cool, right?

Well... yes... kind of....

## Insulin pump hack delivers fatal dosage over the air

Sugar Blues, James Bond style

27 Oct 2011 at 06:23, Dan Goodin

In a hack fitting of a James Bond movie, a security researcher has devised an attack that hijacks nearby insulin pumps, enabling him to surreptitiously deliver fatal doses to diabetic patients who rely on them.

The attack on wireless insulin pumps made by medical devices giant Medtronic was demonstrated Tuesday at the **Hacker Halted** conference in Miami. It was delivered by McAfee's Barnaby Jack, the same researcher who last year showed how to take control of two widely used models of automatic teller machines so he could to cause them to [spit out a steady stream of dollar bills](#).

Jack's latest hack works on most recent Medtronic insulin pumps, because they contain tiny radio transmitters that allow patients and doctors to adjust their functions. It builds on [research presented earlier this year](#) that allowed the wireless commandeering of the devices when an attacker was within a few feet of the patient, and knew the serial number of his pump. Software and a special antenna designed by Jack allows him to locate and seize control of any device within 300 feet, even when he doesn't know the serial number.

"With this device I created and the software I created, I could actually instruct the pump to perform all manner of commands," Jack told *The Register*. "I could make it dispense its entire reservoir of insulin, which is about 300 units. I just scan for any devices in the vicinity and they will respond with the serial number of the device."

An anthropomorphic device, perhaps in the form factor of a doll or toy, may be configured to control one or more media devices. Upon reception or a detection of a social cue, such as movement and/or a spoken word or phrase, the anthropomorphic device may aim its gaze at the source of the social cue. In response to receiving a voice command, the anthropomorphic device may interpret the voice command and map it to a media device command. Then, the anthropomorphic device may transmit the media device command to a media device, instructing the media device to change state.

# Fueling a New Generation of Health Insights

People today want more information to inform the decisions they make about their health. Many different factors that affect one's health: nutrition, lifestyle, medical history - and today, much of this information can be captured in data. **Personal fitness trackers, wearable health monitors, and other connected devices are generating more and more data every day.** But without a glimpse into all the information out there, individuals only receive a fragmented view of the whole picture.

For the first time, IBM Watson Health is creating a more complete and personalized picture of health, powered by cognitive computing. Now individuals are empowered to understand more about their health, while doctors, researchers, and insurers can make better, faster, and more cost-effective decisions.

[Skin Tattoo Takes Body Temperature](#)

A baby born five to 10 years from now in a developed country may get a tattoo not long after her first feeding. It would be an integrated circuit, a discreet and flexible affair, smaller than a postage stamp and probably placed on the chest. It would monitor such biometric parameters as electrocardiogram (EKG), physical activity, nutritional status, sleep duration, breathing rate, body
